DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31 and 70-76, drawn to a multi-step process for preparing final product, classified in class 549, subclass 492.
- II. Claims 32-42, drawn to a process for making intermediate aminocarbonylphenylaminocyclobutenediones, classified in class 564, subclass 142.
- III. Claims 43-54 and 77-81, drawn to a process for making substituted furanmethanamines and compounds made during the synthesis, classified in class 549, subclass 492.
- IV. Claims 55-59 and 83, drawn to a process for making 2-hydroxy-3-nitro-5-halobenzamides and the product of the process, classified in class 564, subclass 142.
- V. Claims 60-65, drawn to a process for making 2-hydroxy-3-aminobenzamides, classified in class 564, subclass 167.
- VI. Claims 66-69, drawn to a process for making furnanaminocyclobutenediones, classified in class 549, subclass 142.
- VII. Claim 82, drawn to a specific salt of alpha-ethyl- 5-methyl-fur-2-ylmethaneamine, classified in class 549, subclass 492.

The inventions are distinct, each from the other because: A long multi-step process is claimed in I. Some of the individual steps are claimed separately, see II-VI.

Art Unit: 1625

These are patentably distinct amongst themselves and with respect to I. For example one or more of them could be unpatentable while I was patentable. The compound in VII is separated from the other compounds involved in process III because it doesn't have the phenalkyl substituent on the N and is patentably distinct.

The searches are not coextensive and because of this and the above, restriction is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
